

Filip Crnobrnja

C++ Team Lead | Senior Software Engineer

📍 Belgrade, Serbia ✉ aashara.c@gmail.com ☎ +381 63 8449 717 in aashara 📧 aashara

Summary

C++ Team Lead with over 5 years of experience in developing high-performance and reliable software. Skilled in designing scalable architectures, optimizing performance, and leading cross-functional teams through all stages of the development cycle. Strong background in C++17/20, multithreading, system design, and process improvement. Adept at bridging technical and business requirements to deliver stable and maintainable solutions.

Skills

Programming: C++(11/14/17/20), C, Python, Lua, QML, ActionScript

Frameworks & Tools: Qt, OpenCV, Flask, Docker, Version Control(Git, Perforce, SVN), Valgrind, CMake, GDB

Leadership & Process: Team Leadership, Technical Direction, Hiring & Onboarding, Mentorship, Agile/Scrum, Waterfall, Process Design, Cross-functional Collaboration

Languages: English(C1), German(A2), Russian(Native), Serbian(Native)

Experience

Team Lead Gameplay

Belgrade, Serbia

Wargaming

Apr 2024 – Present

- Built and led a new gameplay engineering team from the ground up, defining technical direction and hiring core members.
- Delivered key gameplay systems including combat mechanics, ability frameworks, and developer tools for designers.
- Designed a hybrid development process combining Agile and Waterfall for better predictability in early stages.
- Balanced hands-on development with mentorship, improving technical quality and team knowledge sharing.

Tools Team Lead

Belgrade, Serbia

Wargaming

Nov 2023 – Apr 2024

- Managed a tools engineering team, fostering close collaboration with design and art departments.
- Directed development of internal tools in C++/Qt and Python, enhancing performance and usability for content creation workflows.
- Introduced structured delivery pipelines with roadmaps, stakeholder reviews, and prioritization.

Tools Developer

Belgrade, Serbia

Wargaming

Jun 2023 – Nov 2023

- Developed and optimized proprietary game editor features, improving responsiveness and asset workflow efficiency.
- Implemented modular undo/redo system and enhanced prefab editor for complex nested structures.
- Worked closely with stakeholders to refine tool requirements and deliver under production constraints.

Software Developer I

Belgrade, Serbia

Sperasoft

Dec 2022 – Jun 2023

- Led UI development and optimized performance for internal engine tools in Lua.
- Resolved memory leaks and multithreading issues, improving runtime stability.
- Coordinated with external client teams to align features and reduce integration risks.

Junior Programmer

Ubisoft Belgrade

Belgrade, Serbia

Feb 2021 – Dec 2022

- Integrated telemetry and analytics systems into gameplay features in C++.
- Optimized UI components for PC and Stadia platforms.
- Contributed to multiple gameplay systems across full development cycles.

Software Developer

RnDoer

Moscow, Russia

Dec 2019 – May 2024

- Built object recognition pipelines for robotics prototypes using OpenCV and Python.
- Developed web and desktop tools to support testing and automation.
- Created control logic and logging systems for autonomous navigation.

Education

School 21 (Ecole 42 Methodology)

Software Engineering

Nov 2018 – Dec 2022

Peoples' Friendship University of Russia

B.Sc. Mathematics

Sep 2016 – Jun 2020

Projects

World of Tanks / Project CW – Delivered core gameplay features and improved design-to-implementation workflows.

Call of Duty Modern Warfare III / Warzone 2.0 – Integrated analytics and optimized runtime performance.

Skull and Bones / Assassin's Creed series – Contributed to UI, tools, and platform adaptations.

Robotics Prototypes – Implemented vision and control systems for autonomous navigation.
