Experience

Team Lead Gameplay

Belgrade, Serbia

Wargaming

Apr 2024 – Present

- Built and led a new gameplay team of 7 engineers, setting technical direction, hiring key talent, and implementing scalable, performance-focused systems using ECS principles and custom C++ state machines
- Delivered core gameplay systems including combat mechanics, character abilities, ping features, and development tools for game and level designers
- Designed and embedded a hybrid Feature Delivery Lifecycle blending Scrum and Waterfall to stabilize early development and improve coordination across gameplay and design teams
- Contributed as a hands-on developer while mentoring junior engineers, accelerating the team's technical growth and code quality standards
- Fostered a high-trust engineering culture through bi-weekly 1:1s, retrospectives, and a structured knowledge-sharing program where the team regularly presented deep dives into advanced C++ techniques and game architecture patterns

Tools Team Lead

Belgrade, Serbia

Wargaming

Nov 2023 – Apr 2024

- Hired, onboarded, and led a team of 3 tools engineers, fostering a collaborative environment with mentorship and cross-functional communication across design and art departments
- Directed development of internal tools in C++/Qt and Python, including a GPU Particle Editor and terrain humidity painting brushes, designed to optimize speed, performance, stability, and usability for artists and level designers
- Defined delivery pipelines, introducing roadmapping, stakeholder reviews, and task triage systems that improved planning predictability and team efficiency

Tools Developer

Belgrade, Serbia

Wargaming

Jun 2023 – Nov 2023

- Developed and optimized a proprietary game editor using C++/Qt/QML, improving responsiveness and streamlining asset workflows for designers and artists
- Designed and implemented a modular undo/redo system and enhanced the prefab editor to support complex nested structures
- Partnered with stakeholders across disciplines to gather tool requirements, triage feedback, and ship stability and usability improvements under tight production timelines

Software Developer I

Belgrade, Serbia

Sperasoft

Dec 2022 – Jun 2023

- Led UI development and performance optimization for internal game engine tools using Lua, reducing editor load times and improving responsiveness for design teams
- Diagnosed and fixed memory leaks and multithreading issues using debugging and profiling tools (Valgrind, internal logs), significantly improving runtime stability and crash rate
- Coordinated with external client teams and internal developers to align tool feature roadmaps, clarify specifications, and reduce delivery risk in cross-team integrations

Junior Programmer

Belgrade, Serbia

Ubisoft Belgrade

Feb 2021 – Dec 2022

- Integrated real-time telemetry and analytics systems into gameplay features using C++, enabling live metrics that informed feature tuning and design decisions
- Developed and optimized UI components in ActionScript for both PC and Stadia platforms, improving performance and visual consistency across devices

- Participated in full development cycles — from feature planning and implementation to debugging and delivery — across multiple gameplay systems under production deadlines

Software Developer

RnDoer

Moscow, Russia

Dec 2019 – May 2024

- Designed and implemented object recognition pipelines for robotics prototypes using OpenCV and Python, improving detection accuracy for physical target tracking
- Built Flask-based web interfaces and Qt desktop tools to support internal robotics testing workflows and expand automated validation
- Developed control logic and real-time data logging modules for autonomous navigation systems, integrating sensor inputs and supporting replay/debug tooling for field testing

Education

42

Nov 2018 – Dec 2022

Software Engineering

- **Grade:** 21 - Level (Senior degree)
- Programming school. No teachers. No lectures. No grades.

School 21(L'ecole 42) is an educational initiative based on the "school of the future" methodology that has been used by the innovative French programming school "Ecole 42" since 2013. "School 21" trains world-class specialists in information technology (IT) using a unique educational methodology: without teachers, without lectures, without grades. The methodology is based on peer-to-peer, or collaborative learning.

Peoples' Friendship University of Russia

Sep 2016 – Jun 2020

Bachelor's degree, Mathematics

Peoples' Friendship University of Russia is a unique university, a large internationally oriented educational and scientific center, widely known in the world for its achievements in the organization of the educational process, scientific research and international relations. Peoples' Friendship University of Russia draws students from 160 countries of the world every year. The university offers a variety of areas of study and specializations - technical, scientific, medical, economic, humanitarian.

Projects

Games: Coldwar, World of Tanks, Call of Duty Black Ops 6, Call of Duty Modern Warfare III, Call of Duty Warzone 2.0, Skull and Bones, Assassin's Creed III Remastered Stadia, Assassin's Creed Liberation Remastered Stadia, Assassin's Creed Rogue Remastered Stadia

Technologies

Hard Skills: C++, C, Python, ActionScript, QML, Lua, Qt, Docker, Flask, Git, Perforce, SVN

Soft Skills: Team Leadership, People Management, Product Management, Project Management, Technical Leadership

Languages: English (Advanced), Russian (Native), Serbian (Native), German (Pre Intermediate)
